

What GitHub can tell an investor, and what it cannot.

**GitHub can show public
engineering activity.
Commit velocity, contributor
growth, repository
expansion, release cadence.**

It can help form a research question.

Why did the public surface change? What should I investigate?

**It cannot reveal fundraise
timing.**

**A spike is not a funding
forecast.**

**It cannot prove revenue,
founder quality, market fit,
or customer demand.**

**It cannot replace a
conversation, references,
financial diligence, or
judgment.**

**Use public GitHub activity
as one research input.**

**Follow GitDealFlow for the
next method note.**
